Lengths in front
Single-screw extruders for pipe extrusion

With two series that have processing units of different lengths, KraussMaffei Berstorff has perfectly equipped itself to meet the market demands for cost-effective pipe production and high-performance extrusion.

The successful, long-proven 36D single-screw series combines extremely high levels of product quality with cost-effective production.

The single-screw extruders with the 30 L/D processing unit are made for special extrusion and coextrusion applications; in particular, they are used for processing special materials.

Your benefits:
- The right machine and system configuration for all pipe extrusion tasks
- Cost-effective production and an extremely high level of product quality
- System supplier for customer-specific special solutions
First encounter
Take a tour of the KME 125-36 B / R with 36D processing unit

Eccentric feed
Avoids turbulence and maximizes throughput rates

Robust gearbox
Minimal maintenance costs thanks to long service life and low space requirement thanks to U-configuration of gearbox and motor
Ideally dimensioned drive concept
With AC or DC drive unit, air-cooled (standard) or water-cooled (optional)

Deep-nitried grooved bush
Outstanding cooling performance, lowest cooling water consumption, steady material feed – independent of counterpressure – and self-cleaning

Bimetallic barrel
Extremely low rates of wear

Barrier screw
For thermal and materially homogeneous melts and low melt temperatures
The yardstick in pipe production: Optimum homogeneity at a consistently low melt temperature

The process-engineering design of the 36D single-screw extruder series provides you with optimum conditions for successful pipe production.

Thermal homogeneity for excellent pipe quality
Pipe quality is decisively influenced by the thermal homogeneity of the materials that are to be processed. This thermal homogeneity can be clearly seen in the appearance of the inner surface of pipes: Thermal inhomogeneity leads to undesirable wavy surfaces. The operating principle of the 36D single-screw extruder series reliably eliminates thermal inhomogeneities and allows optimal homogeneity at consistently low melt temperatures.

Decisive advantages right down the line
The 36D single-screw extruder series is distinguished by a series of processing advantages that you can easily see for yourself in pipe production: Through an optimum mixing process in the shearing and mixing part of the screw; through perfect line synchronization thanks to the output linearity and the material feed that is independent of the counter-pressure; through an extremely high plasticization performance and distinct thermal homogeneity for perfect product quality; and through maximum output performances at minimum investment costs. Furthermore, you can benefit from our extensive experience gained from numerous successful practical applications. As standard, all machines up to model KME 90-36 B/R are equipped with synchronous AC motor technology.

Optimum mixing in the shearing and mixing part of the screw

As the screw speed increases, the machine’s output also increases linearly.
**Broad range of applications**

The 36D single-screw extruder series is the specialist for processing all common types of material from PE 80, PE 100 and PP. Moreover, of course, it is also suitable for processing a wide variety of other materials, such as LDPE, LLDPE, MDPE, PA 11, PA 12, PE-RT, PE-Xb, PE-Xc, PB, ABS.

**Your benefits:**
- Conveying behavior independent of counter-pressure across the entire speed range
- Low melt temperature profile due to high specific throughputs
- Excellent melt performance
- Gentle melt preparation and optimum melt homogeneity
- Long service life thanks to optimized pressure profiles and low rates of wear
- Clear reduction in cooling water consumption at the grooved bush
- Low-maintenance drive concept in proven U-configuration
- Compact machine design for minimal space requirement
- Outstanding price/performance ratio
Whether extrusion or coextrusion – Choose the best solution for every task

Whatever the extrusion application, KraussMaffei Berstorff has the right solution for it, including control: With impressive technology and excellent cost-efficiency.

Coextrusion for many tasks
The compact construction of the KraussMaffei Berstorff coextruders guarantees their seamless integration into a complete production line – and the height and tilt settings integrated in the coextruders enable their simple connection to the required mold.

Depending on the task, the coextruder’s control system works either independently, speed-synchronized with the main extruder, or it is integrated seamlessly into the overall machine control system. KraussMaffei Berstorff coextruders are used in a wide-ranging spectrum of applications and special tasks; for example, for the extrusion of multi-layer pipes and for the coextrusion of color strips, bonding agent layers, thin inner and outer layers, oxygen barrier layers or sealing lips. Depending on the application and production requirement, the KraussMaffei Berstorff extruders in the 36 D series can also be used as coextruders.

Tailor-made coextrusion solutions for greater flexibility in your production

**Piggyback version:**
Single-screw extruder combination consisting of KME 75-36 B/R as main extruder and KME 45-30 B/R as coextruder. An intelligent machine configuration for manufacturing multi-layer pipes – with the same space requirement as a system that is used for manufacturing single-layer pipes. The machine is extremely operator-friendly, because the coextruder is fully integrated in the control system of the main extruder.

**Sheathing tool**
KM-2L-RKU 01-63 with two KME 30-25 D/C coextruders for coating hot water pipes with bonding agent and an oxygen barrier layer in a post-coextrusion process. A compact configuration for sheathing tasks, for example, for production of pipe made of PE-X, PE-RT and PB.
C6 control system – flexible system for open-and closed-loop control and monitoring of an extrusion line

With its new, innovative C6 control system, KraussMaffei Berstorff offers fast, direct access at all times to the individual units of an extrusion line, to the extruders which work conjointly to produce the product, and to integrated downstream equipment.

With its numerous monitoring and control functions, the C6 control system ensures optimal production preparation and transparency throughout the production process, thereby satisfying the most stringent requirements for excellent product quality and a high level of process reliability.

Multi-touch technology for intuitive operation
The C6 control system is equipped with the latest multi-touch technology and state-of-the-art hardware components. A high-resolution 24-inch full HD screen provides an optimal overview. The intuitive operation and clear screen layout facilitate fast intervention and provide a comprehensive process overview. Units and functions can easily be operated and activated via the touchscreen display. With the C6 control system, KraussMaffei Berstorff has placed a particular emphasis on maintaining continuity in the design in terms of both its operation and its functionality, which have proven successful over a great many years.

Maximum flexibility
The C6 control system offers the user an incredibly high level of flexibility. The composition of parameter pages can be chosen freely, and display and parameter texts can be tailored to individual requirements. In addition, the system components can be connected and disconnected as required.

Fast, secure access management using RFID technology
The C6 control system allows fast, secure access by means of non-contact identification using RFID readers. Remote diagnostics via the Internet and data interfaces to connect to the company network tip the balance to make the C6 control system the perfect solution for all your extrusion line’s control tasks.

Your benefits:
- Modern, innovative operating philosophy
- Fast, intuitive operation
- Highly flexible
- Maximum process reliability
- Optimal monitoring of integrated system concepts and standalone machines
- A variety of user-friendly models

Various operating configurations are available

Swivel-mounted on switching cabinet (standard version)  Mounted on switching cabinet door, tilting (option)  Boom-mounted version (option)  Mobile version (option)
Drinking water pipes made of PE 100 – ready for transport as coils
OEE Plus
Boosting cost-efficiency for you

High overall equipment efficiency (OEE) is a fundamental prerequisite for your company’s success. KraussMaffei Berstorff’s product portfolio comprises tailored machines and lines along with perfectly matched services that increase the economic efficiency and the sustainability of your production. Benefit from our proven know-how of extrusion technology in any application.

For more information about OEE Plus, visit: www.kraussmaffeiberstorff.com/oeeplus
KraussMaffei Berstorff
A strong brand in a unique global group

Value-proven Extrusion Technology solutions
Around the world, KraussMaffei Berstorff stands for reliable and value-proven solutions in Extrusion Technology. These range from using individual extruders for degassing in polymerization, compounding, pipe, profile, film and sheet extrusion, physical foaming and the manufacture of technical rubber articles and intermediates for tire production up to complete extrusion lines. All machines and systems from KraussMaffei Berstorff are custom-configured, for example for the chemical, automotive, construction, packaging or pharmaceutical industry.

There for you around the world
KraussMaffei Berstorff is your partner – from the first planning meeting through development of the best possible technical and business solution up through commissioning, servicing and production of your system. We guarantee high-quality advice, solution expertise, reliable spare parts logistics and fast-reacting service during each phase. Our goal is increasing your success.

Individualized service
Benefit from KraussMaffei Berstorff’s reliable service. Our customer service team and experienced fitters, technicians and engineers are there for you as quickly as possible and even help on location to optimize your systems and processes and to minimize downtime as much as possible. Rely on our highly skilled repair and spare parts service.

You can find additional information about KraussMaffei Berstorff at: www.kraussmaffeiberstorff.com

KraussMaffei Group
Comprehensive expertise

Unique selling proposition Technology
The KraussMaffei Group is the only provider in the world to possess the essential machine technologies for plastics and rubber processing with its KraussMaffei, KraussMaffei Berstorff and Netstal brands: Injection Molding Machinery, Automation, Reaction Process Machinery and Extrusion Technology.

The group is represented internationally with more than 30 subsidiaries and over ten production plants as well as about 570 commercial and service partners. This is what makes us your highly skilled and integrated partner. Use our comprehensive and unique expertise in the industry.

You can find additional information at: www.kraussmaffeigroup.com

The KraussMaffei Group has a global presence. Countries with subsidiaries are marked in light blue. In the white-colored regions, the Group is represented by over 570 sales and service partners.
